WHAT'S INCLUDED

TTF/	4 static styles (Light, Regular, Medium, Bold) as TrueType
OTF/	the same styles as OpenType (CFF)
Variable/	`Wobblesam-VF.ttf`, every style in one file, adjustable in between
Web/	WOFF2 files for websites: each static and the variable font
OFL.txt	the license
README.txt	a plain-text copy of the essentials
This sheet	and Cast-Iron-Type-Catalog.pdf, our other typefaces

WHICH FILES SHOULD I USE?

Design apps	Adobe, Affinity, Figma, Sketch, Canva desktop, Office: install the OTFs.
Older software	or anything that rejects the OTFs: install the TTFs instead.
Variable fonts	Apps with variable-font sliders (recent Adobe apps, Figma, browsers) can use `Wobblesam-VF.ttf` for any weight in between.
Websites	Use the WOFF2 files in Web/.

Install either the OTFs or the TTFs, not both. Two copies of the same font in different formats confuse most font menus.

INSTALLING

macOS	Select the font files, double-click, and choose Install in Font Book. Or drag them into `~/Library/Fonts`.
Windows	Select the font files, right-click, and choose Install (or "Install for all users").
Linux	Copy the files into `~/.local/share/fonts` and run `fc-cache -f`.

Restart any application that was open during installation so that it picks up the new fonts.

WEIGHTS

Boo! Light 300

Boo! Regular 400

Boo! Medium 500

Boo! Bold 700

VARIABLE FONT AXES

tag	axis	min	default	max
`wght`	Weight	300	400	700

The whites of the eyes hold still across the axis while their rims grow, so a heavier letter is wider.

OPENTYPE FEATURES

calt Contextual alternates, on by default. Every letter is drawn three times; along a line the three take turns, so a doubled letter never repeats.

Look, a good book!

salt Stylistic alternates, off by default. Sets every letter in its second drawing, for picking the one you like in a headline.

Look, a good book!

InDesign and Illustrator: the OpenType menu of the Character panel. Affinity: the Typography panel. Figma: Type details. Apps that can't switch features still get the defaults.

ON THE WEB

Copy the WOFF2 files to your site and point a font face at the variable font.

```
<style>
  @font-face {
    font-family: "Wobblesam";
    src: url("/fonts/Wobblesam-VF.woff2") format("woff2");
    font-weight: 300 700;
  }
  h1 {
    font-family: "Wobblesam", cursive;
  }
</style>
```
